**3.15.** Suppose  $f, g \in \mathcal{V}(S, T)$  and that there exist constants C, D such that

$$C + \int\limits_S^T f(t,\omega) dB_t(\omega) = D + \int\limits_S^T g(t,\omega) dB_t(\omega) \qquad \text{for a.a. } \omega \in \Omega \;.$$

Show that

$$C = D$$

and

$$f(t,\omega) = g(t,\omega)$$
 for a.a.  $(t,\omega) \in [S,T] \times \Omega$ .

We'll apply Hô bornetry. Notice that

$$\mathbb{E}\left[\left(C-D\right)^{2}\right] = \mathbb{E}\left[\left(\int_{S}^{T}\left(g(t,\omega)-f(t,\omega)\right)dB_{t}(\omega)\right)^{2}\right]$$

+ B.M. start

On the other hand,

$$C-D=\mathbb{E}\left[(c-D)|F_{s}\right]=\mathbb{E}\left[\int_{s}^{T}\left(g(t,\omega)-f(t,\omega)\right)dB_{t}(\omega)|F_{s}|=0$$

Hence, C=D. Moreover,  $(C-D)^2=0$  and  $\mathbb{E}[(C-D)^2]=0$ . Therefore,
